

AWS IAM Roles and STS.

What is an IAM Role?

An IAM Role is a set of permissions that can be assumed temporarily.

Key point:

A role does NOT have permanent credentials.

It gives temporary credentials via STS.

I have created an user and gave STS policy to that user.

This is the page of the STS.

You have to give all permission to the user policy.

Manual actions | [Add actions](#)

☒ All STS actions (sts:*)

Access level [Expand all](#) | [Collapse all](#)

- ▶ **Read** (Selected 5/5)
- ▶ **Write** (Selected 9/9)
- ▶ **Tagging** (Selected 2/2)

▼ **Resources**

Specify resource ARNs for these actions.

☒ All
☐ Specific

⚠ The all wildcard "*" may be overly permissive for the selected actions. Allowing specific ARNs for these service resources can improve security.

▶ **Request conditions - optional**

Actions on resources are allowed or denied only when these conditions are met.

Then I have created the IAM Role to give the access with the Roles.

And then I have connected using IAM User and Switched to the Role.

Switch Role

Switching roles enables you to manage resources across Amazon Web Services accounts using a single user. When you switch roles, you temporarily take on the permissions assigned to the new role. When you exit the role, you give up those permissions and get your original permissions back. [Learn more](#)

Account ID
The 12-digit account number or the alias of the account in which the role exists.

IAM role name
The name of the role that you want to assume which can be found at the end of the role's ARN. For example, provide the **TestRole** role name from the following role ARN: `arn:aws:iam::123456789012:role/TestRole`.

Display name - optional
This name will appear in the console navigation bar when active. Choose a name to help identify the permission set assigned to the role.

Display color - optional
The selected color displays in the console navigation when this role is active

● Red

Cancel

Switch Role

And then we will get this page.

It will give access to all the services.

Info

An IAM user is an identity with long-term credentials that is used to interact with AWS in an account.
